**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-3, 8, and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nagumo et al (US Patent 6,657,593) in view of Sawamura et al (US Patent 6,535,170).

Nagumo et al disclose, in figure 7C, an antenna device in a radio transmitter and receiver comprising a signal ground, a monopole-type base element 3 having first branch and a second branch with a feed conductor 21, a parasitic element 4 couple to the signal ground. The patent to Nagumo et al differs from the claimed invention because it does not disclose a single matching element connected between the parasitic element and the signal ground. Sawamura et al show, in figure 2B, an antenna device having a matching coil element 231 connected between the antenna element and the signal ground. Since one of ordinary skill in the art would have recognized the benefits of providing the matching impedance of the antenna device it would have been obvious to provide the antenna device of Nagumo et al with a matching element as taught by Sawamura et al. Since the monopole-type base element 3 comprising two branches with different length, it is inherent the monopole-type base element having two different frequency bands.

***Allowable Subject Matter***

3. Claims 4-7, 9 and 11 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
4. The patents to Fukasawa et al, Eggleston, Phillips et al, Sullivan et al, and Sato et al are cited as of interest showing the antenna similar to that disclosed.
